AEON

PRODUCT & DEVELOPER DOSSIER

Version 1.0 | 28 October 2026 | Engineering and product handoff

Your sky. Your perspective.

Scope: web, Android and iOS; six core pillars; illustrated report studio; subscriptions; privacy-first account and data services.

1. Executive product definition

AEON is a local-first, cloud-capable astrology and reflective self-understanding platform. Calculated astronomical positions form the evidence layer; transparent astrological interpretations form the educational layer; journal prompts, relationship views and illustrated dossiers form the experience layer. Astrology is presented as interpretive tradition, not medical science or deterministic prediction.

Audience and jobs to be done

Beginner: understand what planets, signs, houses and aspects mean in everyday life. Enthusiast: explore exact placements, aspects and transits. Reflective user: connect personal journal entries with dated sky events. Couple/friends: compare charts without compatibility scores presented as fate. Gift buyer: commission a beautifully designed downloadable report.

2. Verified baseline and delivery status

Area	Known status	Remaining gate
Existing v5 source	Independent FastAPI/SQLite backend and Expo/mobile source; tests reported passing	Re-run tests against target environment
Six pillars	API endpoints implemented for chart, now, timeline, connections, journal/cycle and deterministic oracle	Full polished visual frontend integration
Report studio	Six categories/styles; downloadable private PDF storage; example ~14 pages	Deep 35–60-page editorial output and artwork QA
Billing	Entitlement infrastructure; checkout intentionally disabled	Store/web payment verification
Deployment	Local development only; not patched into	Original repository, migration, staging and

	aeonapp.grok.me	release
Mobile	Expo source	SDK build, real-device tests, signing, store approval

3. Product information architecture

Primary navigation: Home, Profiles, Readings, Journal, Settings. Contextual access to Now, Chart, Timeline, Connections and Oracle appears on the Home dashboard and within a selected profile. Use persistent profile selector; keep report creation within two interactions of Home. Account deletion is separate from ordinary settings.

Screen	Core actions	States
Home	Choose profile; Now summary; quick reading; timeline; journal	Guest, empty, loading, populated
Profiles	Add/edit/select/delete; birth date/time/place/offset	Validation, uncertain birth time
Chart	Zoom/rotate wheel; select planet, house, aspect; export	Missing time, incomplete data
Now	Day/week/month; transit cards; practical prompts	No close transits, cached
Timeline	Pan/zoom; inspect transit windows; date jump	Large range, no matches
Connections	Select two consenting profiles; synastry/composite	No second profile, consent missing
Journal	Write, filter, inspect sky-at-entry	Offline, sync conflict
Oracle	Ask grounded chart questions; view citations to placements	Unsupported question, no evidence
Readings	Choose type, visual style, preview, generate, download	Queued, rendering, failed, complete
Settings	Privacy, backups, account, subscriptions, accessibility	Signed out, cancellation pending

4. Six core pillars: requirements and acceptance

AEON Chart

Scope: Interactive natal wheel with house cusps, planetary glyphs, exact degrees, aspect lines, accessible tabular alternative. Complete dossier with planet/sign/house synthesis, patterns, glossary and methodological disclosures.

Acceptance: For a known fixture, positions, house assignment and aspect orbs match reference within documented tolerance; wheel and table agree; PDF reopens.

AEON Now

Scope: Personalised daily, weekly and monthly views, based on calculated transits with exact dates/orbs. Avoid ungrounded claims or health predictions.

Acceptance: Date switch changes calculated evidence; timezone boundary is tested; stale data is identified.

AEON Timeline

Scope: Past/current/future navigation, day-to-year zoom, exact hits and retrograde repeats, filtering by planet/aspect/life theme.

Acceptance: Transit windows and peaks agree with reference ephemeris; keyboard and touch navigation work.

AEON Connections

Scope: Consent-aware two-profile synastry, composite midpoint chart, aspect explanations, strengths/tensions without determinist rankings.

Acceptance: Pair ordering is stable; midpoint wrap-around handles 359°/1°; revoking access hides partner data.

AEON Journal

Scope: Entries linked to timestamped calculated sky snapshot; search and export; optional local-only mode.

Acceptance: Entry preserves original sky evidence; account export and deletion cover notes and attachments.

AEON Oracle

Scope: Conversation uses only structured chart, transit and journal evidence user permits. Distinguish observed placements from interpretations; reject invented placements.

Acceptance: Every chart claim has a structured evidence reference; adversarial prompts cannot override source data; unsupported answers acknowledge uncertainty.

5. Illustrated Reading Studio

Report types: Cosmic Blueprint, Love & Relationships, Wellbeing, Life Path, Year Ahead, Synastry. Style options: Celestial Luxe, Modern Insight, Sacred Geometry, Ancient Codex, Data Cosmos, Minimal Monochrome. Report type controls editorial chapters; style controls theme tokens, illustrations and chart skin, never astronomical results.

Required dossier anatomy

Cover; personalised snapshot; how astrology works; wheel and legend; Big Three; 10 planetary chapters; 12 house chapters; aspect dynamics; element/modality/polarity charts;

dominant themes; life domains; practical reflection; methodology; glossary. Full blueprint target: 35–60 pages, subject to meaningful content rather than padding.

Plain-English editorial contract

Every placement explains: (1) what the planet represents, (2) how the sign colours it, (3) which life area the house represents, (4) how the combination might appear in real situations, (5) strengths and possible blind spots, (6) reflective questions. Explain that an empty house is not a missing life area. Clearly distinguish a calculated position from a traditional astrological interpretation.

Rendering and quality gates

Deterministic chart data → interpretation modules → editorial synthesis → SVG vector illustrations → PDF composition → render every page to PNG → automated overflow/font checks → human visual review → private storage and signed download. Include high-contrast and print-friendly variants. Do not generate misleading numerical health scores.

6. Technical architecture

Recommended production topology: React/Expo clients → HTTPS API gateway → FastAPI domain services → PostgreSQL with row-level ownership checks → Redis-backed worker queue → private object storage for reports. Ephemeris calculations run in a versioned deterministic service; report rendering is asynchronous. Existing SQLite remains useful for local development, not multi-instance production.

Service boundaries

Service	Responsibility
Identity	Sign-in, sessions, recovery, account deletion
Profiles	Birth data, location, timezone certainty, access control
Ephemeris	Planet positions, cusps, aspects, transit hits, provenance
Interpretation	Versioned beginner/advanced content and synthesis
Connections	Consent and paired chart computations
Journal	Entries and immutable sky snapshots
Oracle	Evidence retrieval, constrained answer generation, audit trail
Reports	Templates, queues, status, private files, deletion
Billing	Store receipt verification, subscription lifecycle, entitlements
Observability	Metrics, structured redacted logs, alerts, backups

7. Proposed relational data model

Entity	Key fields
users	id, email, password_hash, created_at, deleted_at
profiles	id, owner_id, name, birth_local, timezone_id, utc_offset, lat, lon, time_accuracy
chart_snapshots	id, profile_id, calculation_version, input_hash, positions_json, houses_json
transit_events	id, profile_id, aspect, exact_at, orb, source_version
connections	id, owner_id, profile_a_id, profile_b_id, consent_state
journal_entries	id, owner_id, profile_id, body_encrypted, occurred_at, sky_snapshot_id
oracle_sessions/messages	id, owner_id, profile_id, question, response, evidence_ids
report_styles/types	id, slug, version, theme_json, chapters_json
report_jobs	id, owner_id, profile_id, type, style, status, idempotency_key
report_files	id, job_id, private_object_key, sha256, page_count
subscriptions	id, user_id, platform, product_id, state, renews_at
billing_events	id, provider_event_id, signature_verified, processed_at
audit_events	id, actor_id, action, subject_id, redacted_metadata

All sensitive records must be scoped by owner_id or explicit consent; use migrations, indexes and unique idempotency keys. Store timestamps in UTC and retain original timezone context. Encrypt backups and private files; establish retention/deletion policies.

8. API contracts

Method/path	Purpose
GET /profiles/{id}/chart	Versioned natal placements and aspects
GET /now?profile_id=&period=	Dated personalised transit evidence
GET /timeline?profile_id=&from=&to=	Transit events and exact windows
POST /connections	Create consent-aware comparison
GET /connections/{id}	Synastry and composite chart
POST /journal/cycle	Create reflection with sky snapshot
POST /oracle/sessions/{id}/messages	Evidence-bound answer
GET /studio/catalog	Report types and visual styles
POST /studio/reports	Idempotent queued report generation
GET /studio/reports/{id}	Job status and provenance
GET /studio/reports/{id}/download	Authorized short-lived file delivery
POST /billing/verify	Server-side purchase verification

POST /billing/webhooks/{provider}	Signature-checked state transitions

Standard response envelopes: data, calculationVersion, interpretationVersion, generatedAt, warnings, traceId. Errors: 400 invalid birth data, 401 unauthenticated, 403 unauthorized/entitlement, 404 unavailable, 409 duplicate/conflict, 422 invalid range, 429 rate limited, 503 calculation service unavailable.

9. Subscription and commercial model

Tier	Indicative AUD price	Entitlements
Free	$0	Basic natal, Now preview, journal, sample report
Plus	$7.99/month or $79.99/year	Full standard dossiers, extended timeline, connections, limited Oracle
Cosmos	$14.99/month or $149.99/year	All styles, advanced reports, extended Oracle, priority rendering

Prices are proposals, not active offers. Store purchases must use Apple/Google approved in-app payment paths where required; verify on server, handle refunds, renewal, grace, expiration, cancellations and restores. Never accept a client-provided paid tier. Provide clear tax-inclusive local pricing and cancellation information.

10. Privacy, safety and scientific boundaries

Birth data, relationship information and journal entries are sensitive. Default to minimal collection, user control, consent for cross-profile comparisons, encrypted storage, export and complete deletion. Never imply astrology can diagnose illness, forecast death, guarantee relationships, or determine psychological facts. Wellbeing content must remain reflective and non-clinical. Oracle should cite the exact placements/transits used and avoid invented data.

11. Delivery phases and dependencies

Phase	Work package	Exit criterion
0	Audit original live repo, reconcile v5 baseline, preserve migrations	Source-of-truth and regression suite confirmed
1	Chart UI, Now, Timeline and shared navigation	End-to-end flows work on web and Expo
2	Connections, Journal sky-linking, Oracle evidence UX	Permissions and provenance tests pass
3	Deep report content, six art systems, PDF renderer QA	35–60-page report passes page-by-page review
4	PostgreSQL, workers, storage, monitoring, backup	Load, recovery, security and deletion tests pass

5	Billing, entitlement and refund flows	Sandbox purchase/restore/cancel/refund verified
6	Mobile device QA, signing, staged deployment	Android and iOS release candidates verified

12. Test matrix and release gates

Calculation: historical/timezone/DST fixtures, retrogrades, house cusps, angular wrap, composite midpoints. Functional: profile CRUD, profile switching, date navigation, journal linkage, report retry and idempotency. Security: horizontal access control, signed URLs, injection, rate limits, token expiry, billing webhook replay. UX: keyboard, screen reader, reduced motion, small-screen, low-bandwidth and offline states. PDF: every page rasterized and checked for clipping, fonts, contrast, chart accuracy. Mobile: real Android/iOS device and upgrade tests. Operations: backup restore, migration rollback, alerting and retention jobs.

13. Risks, decisions and handoff

Priority risks: unknown live aeonapp.grok.me repository and deployment ownership; ephemeris commercial licensing; timezone accuracy; privacy/security of birth and journal data; report editorial quality; payment provider compliance; unverified mobile signing. None should be treated as completed based solely on passing unit tests.

Decisions to lock

Choose authoritative production repo and deployment account; select production database/hosting; resolve Swiss Ephemeris licensing; approve the six report art directions; define Oracle model/provider or retain deterministic mode; approve subscription SKUs; confirm Android package ID and iOS bundle ID.

Definition of done

A feature is done only when implemented in source, integrated into web/mobile navigation, tested with real data, checked for authorization and accessibility, documented, and deployed to a verified environment. A release is done only with monitored production rollout, rollback path and real-device/store verification.
